REIMBURSEMENT MANAGEMENT SYSTEM

NOTES / CONSTRAINTS

- EMPLOYEE is the superclass; it is specialised into APPLICANT and MANAGER through an overlapping ISA hierarchy.
- Overlapping: a MANAGER is also an EMPLOYEE and may itself act as an APPLICANT (but cannot approve its own claim).
- Employee_ID, Name, Email, Department, Designation, Date_of_Joining and Phone belong to EMPLOYEE and are inherited by both subclasses.
- MANAGER has no key of its own -- Employee_ID is inherited as its primary key; Approval_Limit is its only specific attribute.
- APPLICANT is the claim-submitting role of an employee; Bank_Account_No (payout account) is its role-specific attribute.
- SUBMITS: APPLICANT (1) : REIMBURSEMENT (N) -- APPLICANT partial participation, REIMBURSEMENT total participation.
- APPROVES: MANAGER (1) : CLAIM_PROCESS (N) -- both sides partial participation (single lines).
- SUPERVISES is a recursive 1 : N relationship on EMPLOYEE with role names supervisor / subordinate.
- EXPENSE_ITEM is a weak entity (identifier = Reimbursement_ID + Item_No); Total_Amount is derived; Phone is multivalued.
- CLAIM_PROCESS aggregates APPLICANT -- SUBMITS -- REIMBURSEMENT so that MANAGER can approve the relationship itself.
